

Delivering the strategy

Øystein Løseth
President and CEO

Stockholm, 21 September 2011

Today's focus

- Vattenfall at a glance
- Delivering the strategy
- Vattenfall's key strengths
- Electricity demand outlook
- Political and regulatory outlook
- German nuclear phase out
- CO₂ reduction

Vattenfall at a glance

Facts (2010)

Number of employees (FTE):	38,179
Net sales (MSEK):	213,572
Operating profit (MSEK):	29,853
Total assets (MSEK):	541,432
Electricity generation (TWh):	172.5
Heat sales (TWh):	44.5
Numbers of customers (million):	
-Electricity	7.8
-Gas	2.1
-Network	5.7
100% owned by the Swedish state	

Vattenfall - a leading European energy company

- Operations in eight markets
 - concentrating on 3 core countries
- Number 6 in electricity generation
- Number 1 in heat production

Owner's mandate, Vattenfall's vision and strategic direction

The owners mandate:

"The object for the Company's activities is to generate a market rate of return by operating a commercial energy business that enables the company to be among the leaders in developing environmentally sustainable energy production."

Vattenfall's vision:

Vattenfall will create a strong and diversified European energy portfolio with sustainable and increased profits, significant growth options and will be among the leaders in developing environmentally sustainable energy production.

Vattenfall's strategic direction:

- Greater focus on profitability and value creation
- Focus on three core markets
- Three main products – electricity, heat and gas
- Reduced CO₂ exposure and growth in low CO₂ emitting energy production and in gas

Vattenfall's new strategic direction in brief

CONSOLIDATION PHASE **2010-2013**

Improve operating performance

Cost reduction and revenue improvement

Create financial flexibility

Revised CAPEX and divestment of non-strategic business operations

Start reshaping the business portfolio

Focus on core markets and reduced CO₂ exposure

New business-led organisational structure
Operational 1 January, 2011

GROWTH PHASE **2014-**

Growth in low CO₂-emitting energy production and gas

Focus on wind, nuclear, biomass, hydro and gas power

Secure strong positions in core European markets

Focus on core markets with potential to maintain or build critical size – currently Sweden, Germany and the Netherlands

Prioritised actions

Improve operating performance

SEK 6 bn annual cost reduction (11%), by end of 2013

Create financial flexibility

5 year CAPEX programme
2011-2015: reduced to SEK 165 bn
(2010-2014: SEK 201 bn)

Divest assets that are not in line with Vattenfall's strategic direction

Maintain single A category rating

Reshape the business portfolio

Remain an integrated but generation-focused utility; keep electricity, heat and gas

Focus on attractive markets with growth opportunities where Vattenfall has or can build a strong size position

Pursue a diversified portfolio and grow in low CO₂-emitting energy production and gas

Decrease absolute CO₂ emissions from 90 Mt* to ~65 Mt **

* 2009, ** by 2020

Main achievements

Cost-cutting programme SEK 6 billion	• On track
Divestments of non-core business	• Cash proceeds in H1 2011 SEK 5.9 billion
Revised capex plan	• SEK 165 billion for 2011-2015 (compared with SEK 201 billion for 2010-2014). Further reductions planned
New business-led organisational structure	• 1 January 2011

Vattenfall's strengths from a credit perspective

Governance & Strategy

- Strong owner
- Clear mandate
- Experienced Board and company management
- Clear, focused corporate strategy
- Firm "A range" rating commitment

Markets & Products

- Good geographical base
- Good product mix; Electricity, Heat, Gas
- Low cost generation portfolio:
 - Low CO₂ and high margin hydro and nuclear in Nordic
 - Low cost lignite in Germany
- Increasing wind power; leading offshore wind position
- Significant share of cash flow from regulated business
- No material exposure to oil-indexed long-term gas procurement contracts

Cash position & Hedging

- Strong liquidity
- Excellent relationship banks
- No immediate funding need
- Prudent hedging strategy

Proven execution ability

- Integration of Nuon completed – synergies captured
- Divestment programme on track
- Cost reduction programme on track
- New business-led Group structure successfully implemented

5 year CDS development reflects the market's view on Vattenfall's low credit risk vs peers

Source: Barclays Capital 15 September 2011

Long-term market outlook

- European energy policies sending mixed signals:
 - EU market and policy integration vs. national solutions
 - Decarbonisation goals vs. reduced efforts to mitigate CO₂
- EU's 20-20-20 targets driving market developments:
 - 20% renewables target pushes low marginal cost generation into the market
 - 20% CO₂ reduction seems reachable without substantial increase of EU-ETS prices
 - 20% reduction of energy use seems too ambitious but intensified action from EU and national policy makers has been taken
- Going forward we see:
 - Current economic instability potentially leading to a reduced speed of the energy transition
 - Increased uncertainty in UK, France, and Poland where significant market reforms are executed
 - Electricity demand only slowly recovering, not reaching pre recession levels for several years
 - The German nuclear phase-out influencing capacity balances in North West Europe, leaving room for increased production from existing fossil fuelled assets and new build gas-fired assets predominantly after 2020

Electricity demand will only slowly recover after the recession

Nordic, German and the Netherlands electricity demand development

Nordic:

Industrial electricity demand growth but to some extent offset by energy conservation in all sectors

Germany:

Moderate increase in the mid-term but expected decline over time due to population decrease and structural changes

Netherlands:

Steady growth due to less intensive energy savings measures in combination with industry growth

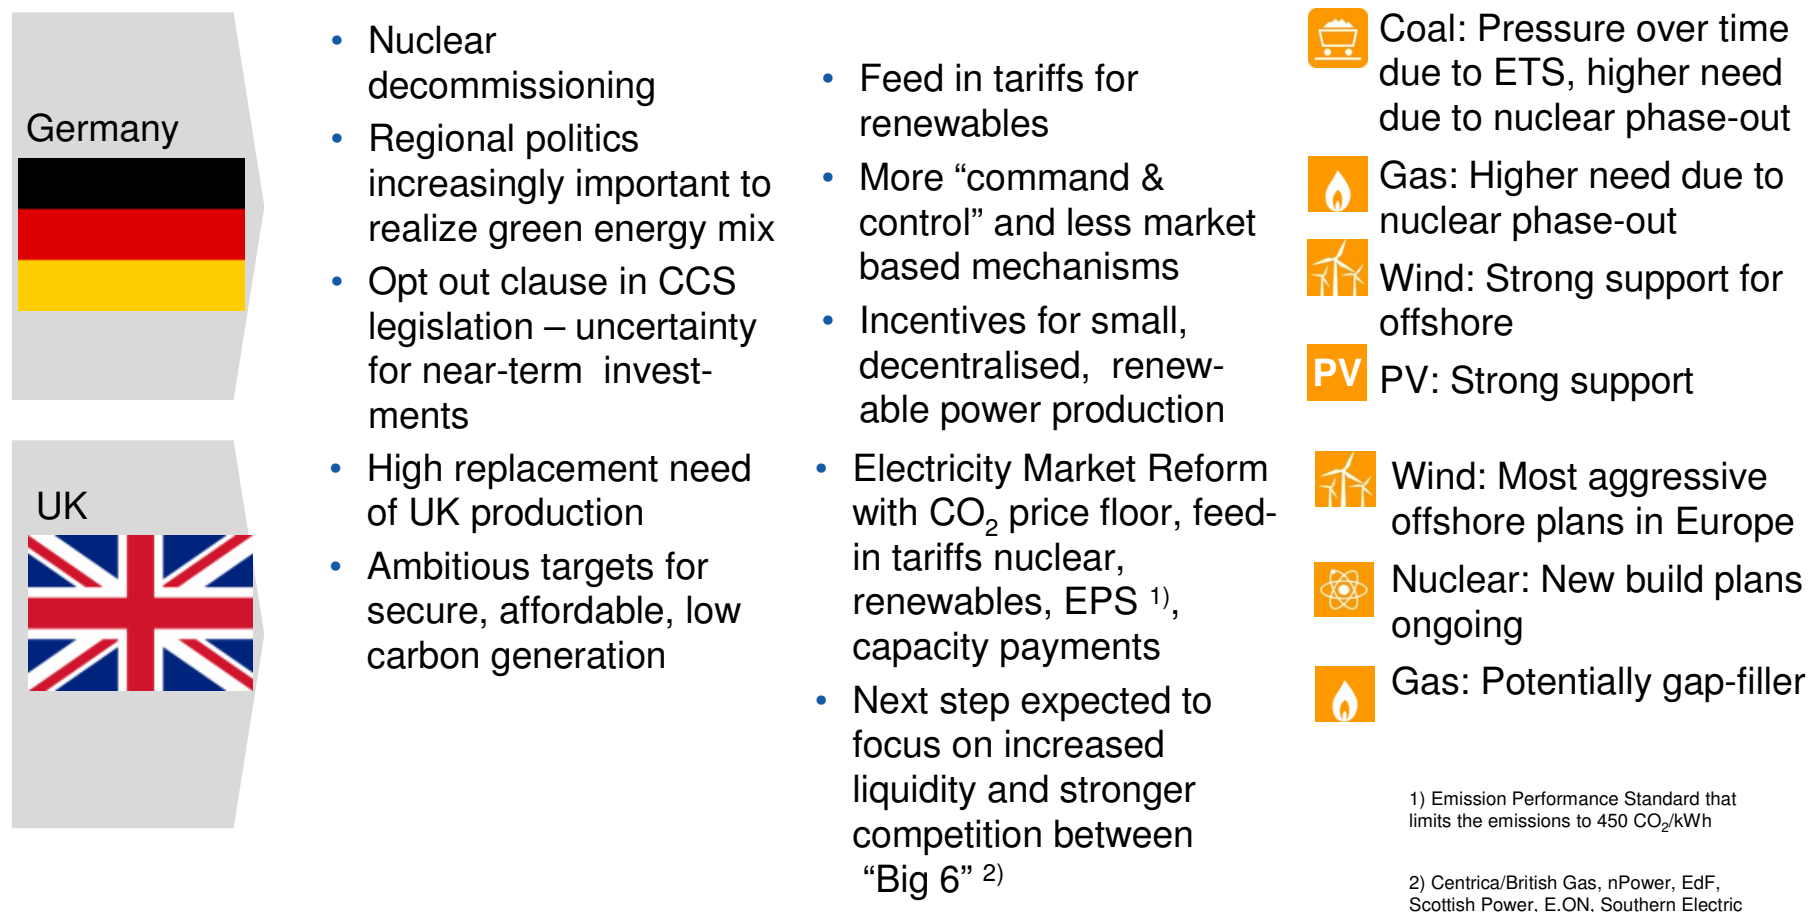

Uncertainties:

- Long-term effects of recent economic turmoil
- Implementation of energy efficiency measures
- Electrification of transport sector

Political and regulatory outlook: Sweden and UK

Political and regulatory outlook: Germany and NL

German nuclear phase-out

- German parliament decided to reverse last year's life-time extension decision on German nuclear plants. New legislation became effective beginning of August 2011.
- Remaining 9 German nuclear plants to be phased out step by step by end of 2022.
- All pre-1980 nuclear plants, including Krümmel, (in total 8 plants) not permitted to restart.
 - Consequence: Vattenfall's nuclear plants Brunsbüttel (66.7%) and Krümmel (50%) will not restart.
- Dismantling of both plants is estimated to start 2019.
 - Estimated dismantling periods:
 - Brunsbüttel: 2019-2032
 - Krümmel: 2019-2036
- Vattenfall expects compensation for its financial losses

EU aims at decarbonising the power sector by 2050

EU aims at 80% reduction of GHG by 2050...

EU GHG emission target by sector until 2050 (%)

Reduction
compared
to 1990

All sectors:	40%	80%
Power sector:	60%	95%

The overall goals are clear, but lack of agreement on how to get there and additional policies will be needed

... but there are different views on the path to get there

- Strong consensus in EU to reduce CO₂ emissions, but...
 - Some member states are asking for more aggressive reductions
 - Signs of member states introducing own national regulations, e.g. EMR in UK
 - Discussion of most effective policy regime, market mechanism vs. “command & control”

Vattenfall's path to reduced CO₂ emissions

Total absolute CO₂ emissions

Mtonnes, pro-rata share

We are delivering on our consolidation strategy

- We are on track:
 - Divestment and cost reduction programmes on track
 - Capex are being reduced
 - Nuon integration completed and synergies captured
 - Significant profitability improvement in electricity sales business
 - New business-led organisation successfully implemented
- Clear goal to improve profitability and strengthening financial position.
- In the midst of challenging environment for utilities – Vattenfall maintains a strong position in economically and politically stable markets.
- Profitable growth opportunities within low carbon power generation, and energy trading.

Appendix

The German production mix is expected to change substantially until 2020: renewable energy increasing, nuclear decreasing

2010 production mix (total 600 TWh)

2020 production mix (total ~600 TWh)

The growing amount of renewable production in Germany will partly replace production from the decommissioned nuclear capacity

The policy maker will “construct” the merit order curve through shifting the attractiveness of technologies and thus increase regulatory exposure

2000: Predictable supply and stable base load

2020: More intermittent supply and thus reduced base load
